RDS-EON/FM-MPX/MW/LW
Radio Cassette Combination
With CD Changer Control

Model **ARX5370R**
(PE-1531E)

■ SPECIFICATIONS

Radio section

Tuning system: PLL synthesizer tuner

Frequency range:
FM: 87.5MHz to 108MHz
(0.05MHz steps)
MW: 531kHz to 1602kHz
(9kHz steps)
LW: 153kHz to 279kHz
(1kHz steps)

Tape section

Cassette type: Compact audio cassette

Playback system: Auto reversing 4-track, 2-channel
stereo cassette tape playback
(monaural playback also possible)

Frequency range: 20Hz to 20kHz (metal)

Wow & flutter (WRMS):
0.06%

Channel separation (1kHz):
45dB

Signal to noise ratio:
58dB (metal)
67dB (Dolby B NR, metal)

Power amplifier section

Maximum power output:
120W (30W × 4ch)

Effective power output (1% THD):
14W × 4

General

Power supply voltage:
DC14V (10.8V to 15.6V allowable)
negative ground

Power consumption:
Less than 10A

Speaker impedance:
4Ω (4Ω to 8Ω allowable)

Line output (with CD changer 1kHz, 10kHz):
1.8V

Auto antenna rated current:
0.5A or less

Dimensions (mm): 178(W) × 50(H) × 152(D)

Weight: 1.3kg

To engineers in charge of repair or inspection of our products.

Before repair or inspection, make sure to follow the instructions so that customers and Engineers in charge of repair or inspection can avoid suffering any risk or injury.

1. Use specified parts.

The system uses parts with special safety features against fire and voltage. Use only parts with equivalent characteristics when replacing them.

The use of unspecified parts shall be regarded as remodeling for which we shall not be liable. The onus of product liability (PL) shall not be our responsibility in cases where an accident or failure is as a result of unspecified parts being used.

2. Place the parts and wiring back in their original positions after replacement or re-wiring.

For proper circuit construction, use of insulation tubes, bonding, gaps to PWB, etc, is involved. The wiring connection and routing to the PWB are specially planned using clamps to keep away from heated and high voltage parts. Ensure that they are placed back in their original positions after repair or inspection.

If extended damage is caused due to negligence during repair, the legal responsibility shall be with the repairing company.

3. Check for safety after repair.

Check that the screws, parts and wires are put back securely in their original position after repair. Ensure for safety reasons there is no possibility of secondary problems around the repaired spots.

If extended damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

4. Caution in removal and making wiring connection to the parts for the automobile.

Disconnect the battery terminal after turning the ignition key off. If wrong wiring connections are made with the battery connected, a short circuit and/or fire may occur. If extensive damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

5. Cautions regarding chips.

Do not reuse removed chips even when no abnormality is observed in their appearance. Always replace them with new ones. (The chip parts include resistors, capacitors, diodes, transistors, etc). The negative pole of tantalum capacitors is highly susceptible to heat, so use special care when replacing them and check the operation afterwards.

6. Cautions in handling flexible PWB

Before working with a soldering iron, make sure that the iron tip temperature is around 270°C. Take care not to apply the iron tip repeatedly (more than three times) to the same patterns. Also take care not to apply the tip with force.

7. Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

ADJUSTMENT

FM section

Item	Procedure	Measuring instrument
S-meter	1. Input the 98.1MHz/30dB μ (400Hz-MOD 30%) signal. 2. Turn on the power switch, and, Press the AF button and CH6 button at the same time. (TEST MODE) 3. Adjust the reading of LCD indicator to [30----00] (3.0V \pm 0.2V) by VR1.	SG

Tape section

Item	Procedure	Measuring instrument
Dolby level	1. Playback a Dolby level test tape (400Hz, 200nWb/m), and connect the milli-volt meter to TP1(R) and TP2(L). 2. Adjust VR401(R) and VR402(L) to obtain an output of 300mV \pm 1dB. (Dolby SW: OFF)	Milli-volt meter Test tape

■ TROUBLESHOOTING

Problem	Cause	Measure
Power does not turn on. (or no sound is produced.)	Fuse is blown.	Replace with a fuse of the same amperage as the old fuse.
	Connections are improper.	Read the attached "installation/wire connection guide" once again and wire properly.
Sound quality is poor.	Playback head is dirty.	Use a cleaning tape, etc. to clean the head.
No sound while unit can be operated.	Power ANT lead is shorted to the ground.	Turn the unit off, first. Remove all connecting wires from the power ANT lead, and turn the unit on, then re-connect a wire one by one to the power ANT lead. When sound is muted again, check the unit with a wire connected last.

This unit is equipped with a number of self-diagnosis functions to protect the system. If a problem should occur, the user is warned through various error displays. Eliminate the problem using the procedures shown below.

Error display	Procedure
Er 2	This indicates that a problem has occurred with the CD changer's mechanism (disc cannot be changed or ejected, etc.) →The CD changer mechanism is likely damaged.
Er 3	This indicates that the pickup is out of focus during playback due to scratches on the disc, etc.
Er 6	This indicates that the CD's TOC (table of contents) cannot be read, for example because the selected disc is upside-down.
Er 8	This is displayed if a cassette tape gets stuck during loading or ejecting. →Remove the cause for which the cassette tape got stuck.

If a display other than one of the displays above appears, press the reset button.
